Maintenance

Parquetvinyl by Lamett

EASY PEASY FLOOR CARE
for regular maintenance

Regular maintenance

Mix 125 ml Easy Peasy Floor Care with 5 litres of cold water.
Mop the floor lengthwise.
Afterwards, mop the floor with a wrung out mop and leave to dry for a while.

This way, your Parquetvinyl remains longer beautiful

1. Vacuum or sweep the floor daily to remove dirt, pebbles, sand, etc. Make it easy on yourself and provide a cleaning mat (without rubber backing): this will keep most dirt out.
2. Apply suitable protection to the legs of chairs, tables and other furniture. Choose beige felts, not coloured ones.
3. Fit office chairs with non-rubber castors for hard floors. Even better is to put a protective mat under the chair. It is mainly pebbles under the shoes or in the wheels that cause scratches. If you don't install a mat, check the wheels regularly and remove accumulated dirt.
4. Make sure your pets have short nails. This is better for the animal and for the floor.
5. Always use a mild cleaning product. Abrasive or aggressive cleaning products can damage the top layer of the floor. Products based on oil or wax are not suitable.

Caution: prolonged contact with rubber may cause vinyl to react and result in permanent stains. Avoid contact with rubber and Parquet vinyl. Therefore do not use doormats with rubber backing.

Stains

Common stains (coffee, wine, sauce, butter, oil, etc.) can usually be easily removed with water and Easy Peasy Floor Care.

Stains of asphalt, shoe polish, paint, ink, nail polish, etc. can often be removed with a cloth with synthetic thinner. It is always advisable to test first on a less visible spot.

Wax or chewing gum can be loosened after curing with your fingernail or plastic scraper. If this does not work, use synthetic thinner.

Repeat several times if the stain is not completely removed. Always use the cleaning products according to the instructions. Never use abrasive materials.

Scratches

In case of scratches we recommend Woca Master Care for lacquered floors, vinyl and laminate. This product lays a film on your floor and fills in scratches. This gives the floor an even shine and scratches are less noticeable.
Always treat the entire floor and use the product according to the instructions on the packaging.
